

Andreu Slynchyk

Full-stack engineer

Profile

4 years

A highly motivated specialist who has been working in the IT field who's been working for about four years, I like to take initiative and take responsibility into my own hands. Worked on a variety of projects, created project architecture from scratch, and managed various sized teams.

Work experience

Lead frontend developer

CryptoB

team: 1 frontend dev, 1 backend dev, 1 devops

Link: cryptob.io

- Tool: JavaScript, TypeScript, React, NextJs, React query, Tailwind, Shadcn...
- Solely responsible for the frontend development, focusing on both layout and optimized data fetching. Utilized SSR (Server-Side Rendering) and asynchronous components as well as server functions from Next.js.
- Developed a comprehensive platform with extensive functionality, including user authentication, real-time data updates, and interactive UI components. Ensured scalability and performance optimization across all features.
- Collaborated closely with the product management and QA teams to gather detailed feedback on bugs and usability issues. Implemented a systematic approach to track, prioritize, and resolve issues efficiently, ensuring a seamless user experience and maintaining high code quality.

Software engineer

Ninetwothree

- Tool: JavaScript, TypeScript, React, Knex.js, Chakra, Postgress...
- Solely developed a product from inception to final delivery, architecting the entire system and making critical design and architectural decisions.
- Engaged directly with clients to gather and refine requirements, ensuring alignment with their needs and goals.
- Contributed to rapid application development as part of a small, agile full-stack development team, enabling accelerated delivery of features and iterations.
- Implemented comprehensive unit testing for the platform to ensure code quality, reliability, and maintainability.
- Designed and developed the backend for both an admin panel and a mobile application, participating in system architecture planning and backend implementation for seamless integration across platforms.

Lead developer

Point Education

team: 2 developers, 1 lead, 1 CTO

- Tool: JavaScript, TypeScript, tRPC, NestJs, React, NextJs, React query, Tailwind, Shadcn, Monorepo, MongoDB...
- Led a team of developers, providing guidance in writing code, solving complex problems, and conducting thorough code reviews. Fostered a collaborative environment to ensure best practices and high-quality standards were maintained.
- Made critical decisions regarding the application structure and architecture. Set up a sophisticated project structure in a monorepo, utilizing both NestJS and tRPC concurrently to streamline development and ensure robust performance and scalability.
- Actively participated in organizing daily stand-ups and delivering project milestones to clients within very tight deadlines. Focused on achieving maximum results by optimizing workflow and ensuring clear communication and efficient task management.

2023.06

Software engineer

LeanSquad, Kiev

team: more than 30 developers

- Spearheaded the development and optimization of AWS Lambda functions within a complex, serverless architecture, ensuring high availability and scalability for a mission-critical application.
- Designed and implemented AWS Step Functions to orchestrate intricate workflows and dependencies, enhancing operational efficiency and maintainability of the application.
- Continuously fine-tuned Lambda functions, Step Functions, and EventBridge rules to enhance performance, reduce latency, and minimize operational costs, resulting in a highly responsive and cost-effective system.
- Proactively identified and resolved operational issues and errors using AWS CloudWatch Logs, providing timely incident response and root cause analysis to ensure uninterrupted service delivery.
- Collaborated with cross-functional teams to gather requirements, documented design decisions, and provided comprehensive technical documentation for project stakeholders, ensuring clarity and knowledge transfer.

2021

Software engineer

Erbis, Kiev

- Formed highly scalable solutions enabling positive user experiences and lucrative business growth by partnering with full-stack staff personnel.
- Developed effective front design leveraging various frameworks, consisting of Gatsby, NextJs, pure React, and AWS services.
- developed back-end n-level architecture, increasing application performance by 15%

PROJECTS

2020

InstAlign

- Tool: JavaScript, TypeScript, React...

Developed promo web-sites and main startup web-site using JS and React, Redux. Co-creator design for the project.

2021

Une Main web-site

- Tool: NextJs, SSG, Stripe, contentful, AWS...

Created web-site for An international organization helping refugees in France, and deploy it on AWS Amplify.
